

IMPORTANT NOTE FOR THE APPLICATION

As of now Organizations can register and log in to StraySpirit, but can't add any posts for pets, products or events. After assignment 4 we'll make sure that organizations can add these posts (pets, products and events). We will also make sure that only organizations can create events and not personal users.

Rajashri mentioned that for event management the user who has created an event can't register for it (basically register button should not be visible for that event). We've implemented this functionality partially as the person who has created an event can't register for any of the events and someone (logged in or not logged in) who has not created any event can register for the event (register button will be visible). This issue will be resolved once organizations can add events and thereafter only personal users can register to events and organization users can't register to events but add them.

Also, organization data is not being retrieved in the my profile page.

All the functionality for our features is working fine for Personal Users.
